

**PREFACE: PROCEEDINGS OF THE INTEGERS CONFERENCE
2016: SPANNING THE GENERATIONS**

The Editors

The “Integers Conference 2016: Spanning the Generations” was held October 6–9, 2016, at the University of West Georgia. The conference featured plenary talks presented by Robert Gough, Alex Iosevich, and Igor Shparlinski, and many additional talks covering a range of topics in number theory and combinatorics. This special volume of *Integers* consists of eight refereed articles, which are expanded and revised versions of talks presented at the conference. The conference was made possible with the generous support of the National Science Foundation and the University of West Georgia.
