2.8 The Derivative as a Function

Marius Ionescu

September 20, 2010

Marius Ionescu 2.8 The Derivative as a Function

∃ >

Definition

• The derivative of a function f is a new function defined by

$$f'(x) = \lim_{h \to 0} \frac{f(x+h) - f(x)}{h}$$

• We will say that a function f is differentiable at a point x = a if the derivative function f' exists at a.

Suppose we consider the piecewise defined function

$$f(x) = \begin{cases} x & x \le 1 \\ 1 & 1 < x < 3 \\ -x + 4 & 3 \le x \end{cases}$$

Э

Suppose we consider the piecewise defined function

$$f(x) = egin{cases} x & x \leq 1 \ 1 & 1 < x < 3 \ -x + 4 & 3 \leq x \end{cases}$$

It's derivative is:

$$f(x) = \begin{cases} 1 & x < 1 \\ 0 & 1 < x < 3 \\ -1 & 3 < x \end{cases}$$

Differentiable functions and Continuous functions

Fact

Important:

• If f is differentiable at a, then f is continuous at a.

Differentiable functions and Continuous functions

Fact

Important:

- If f is differentiable at a, then f is continuous at a.
- If f is continuous at a, then f might not be differentiable at a.

A continuous function which is nowhere differentiable (Weierstrass) From Wikipedia

Marius Ionescu 2.8 The Derivative as a Function

$$y' = D_x y = \frac{dy}{dx} = \frac{d}{dx}f(x) = f'(x).$$

< 🗗

(ロ) (部) (E) (E) (E)

For the function y = f(x) = 1/x, find the slope of its tangent line at x = 2. Compare it with the average rate of change over the interval [2, 3].

イロト イポト イヨト イヨト

臣

• When we differentiate a function f(x) we obtain a new function f'(x).

・ロト ・回ト ・ヨト ・ヨト

臣

- When we differentiate a function f(x) we obtain a new function f'(x).
- The derivative is again a candidate for differentiation, and we call its derivative the second derivative of f(x).

• • = • • = •

- When we differentiate a function f(x) we obtain a new function f'(x).
- The derivative is again a candidate for differentiation, and we call its derivative *the second derivative* of f(x).
- So long as the derivatives exist we can continue this process to obtain a succession of higher derivatives.

• • = • • = •

$$y'' = f''(x) = \frac{d^2y}{d^2x} = \frac{d}{dx}\frac{d}{dx}f(x) = \frac{d^2}{dx^2}f(x) = Dx^2y = Dx^2f(x).$$

・ロ・ ・ 日・ ・ 日・ ・ 日・

$$y^{(n)} = f^{(n)}(x) = \frac{d^n y}{d^n x} = \frac{d^n}{dx^n} f(x) = Dx^n y = Dx^n f(x).$$

・ロト ・四ト ・ヨト ・ヨト

Find the third derivative of the function

$$f(x) = 3x^3 + 4x^2 + 1.$$
