## Polar Coordinates

### Fact

The polar coordinates  $(r, \theta)$  of a point are related to the rectangular coordinates  $(x, y)$  by the equations

$$r^2 = x^2 + y^2$$

$$x = r \cos \theta$$

$$y = r \sin \theta.$$

Notes

---

---

---

---

---

---

---

---

## Polar Rectangles

### Definition

A **polar rectangle** is a domain that can be expressed as

$$D = \{(r, \theta) \mid a \leq r \leq b, \alpha \leq \theta \leq \beta\}.$$

Notes

## Change to Polar Coordinates in a Double Integral

### Fact

If  $f$  is continuous on a polar rectangle  $R$  given by  $0 \leq a \leq r \leq b$ ,  $\alpha \leq \theta \leq \beta$ , where  $0 \leq \beta - \alpha \leq 2\pi$ , then

$$\iint_R f(x, y) dA = \int_{\alpha}^{\beta} \int_a^b f(r \cos \theta, r \sin \theta) r dr d\theta.$$

Notes

---

---

---

---

---

---

---

---

---

---

---

---

## Examples

### Examples

Evaluate the following integrals:

- $\iint_R (3x + 4y^2) dA$ , where  $R$  is the region in the upper half-plane bounded by the circles  $x^2 + y^2 = 1$  and  $x^2 + y^2 = 4$ .
- $\iint_R (2x - y) dA$ , where  $R$  is the region in the first quadrant enclosed by the circle  $x^2 + y^2 = 4$  and the lines  $x = 0$  and  $y = x$ .
- $\iint_D e^{-x^2 - y^2} dA$ , where  $D$  is the region bounded by the semicircle  $x = \sqrt{4 - y^2}$  and the  $y$ -axis.

Notes

---

---

---

---

---

---

---

---

---

## Example

### Example

Find the volume of the solid bounded by the plane  $z = 0$  and the paraboloid  $z = 1 - x^2 - y^2$ .

Notes

---

---

---

---

---

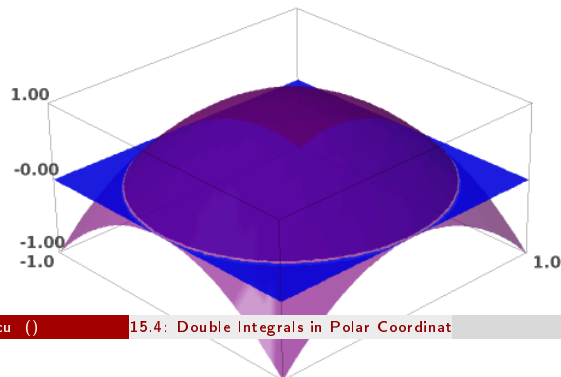

---

---

---

---

---

## Type II domains in polar coordinates

### Fact

If  $f$  is continuous on a polar region of the form

$$D = \{(r, \theta) : \alpha \leq \theta \leq \beta, h_1(\theta) \leq r \leq h_2(\theta)\}$$

then

$$\iint_D f(x, y) dA = \int_{\alpha}^{\beta} \int_{h_1(\theta)}^{h_2(\theta)} f(r \cos \theta, r \sin \theta) r dr d\theta.$$

Notes

---

---

---

---

---

---

---

---

---

---

## Examples

### Examples

- Evaluate  $\iint_D x dA$ , where  $D$  is the region in the first quadrant that lies between the circles  $x^2 + y^2 = 4$  and  $x^2 + y^2 = 2x$ .
- Use a double integral to find the area enclosed by one loop of the four-leaved rose  $r = \cos 2\theta$ .
